

Gagan Kavaraganahalli Prasanna

Data Analyst | Boston, MA | (413)-466-2586 | kpgagan20@gmail.com | [Linkedin](#) | [Github](#) | [Portfolio](#)

EDUCATION

University of Massachusetts Amherst

Master of Science in Business Analytics — GPA: 4.0

Amherst, MA

Sep 2024 – Feb 2026

Visvesvaraya Technological University

Bachelor of Engineering in Information Science & Engineering — GPA: 3.3

Bangalore, India

Aug 2017 – Jun 2021

TECHNICAL SKILLS

Analytics & BI: Advanced Excel, Tableau, Power BI, Alteryx, Exploratory Data Analysis, Dashboarding, Forecasting, KPI Design, Data Storytelling, Data Modeling, Cross-Functional Communication

Data Languages: SQL (PostgreSQL, SQL Server), Python (Pandas, Scikit-Learn, Seaborn), ETL/ELT, Snowflake, Databricks

Cloud & Tools: AWS (S3, RDS, EC2, Lambda), Azure (Data Lake, Synapse), Git, JIRA, Docker

EXPERIENCE

University of Massachusetts Amherst

Student Analyst

Amherst, MA

Nov 2024 – Dec 2025

- **Reduced food wastage by 20%** by analyzing ~10,000 daily dining entries in Excel and Python to uncover consumption patterns and forecast demand for high-volume menu items.
- **Optimized raw-material procurement and daily production volumes** by modeling demand forecasts from historical and real-time entry data, guiding kitchen staff to curb overproduction.
- **Enabled leadership to make data-driven menu and operational decisions** by building interactive **Tableau dashboards** surfacing peak dining hours, menu demand trends, and wastage metrics.

Accenture

Data Analyst

Bangalore, India

Apr 2022 – Jun 2024

- **Helped cut client onboarding from 2 weeks to 4 days** by building services for an internal platform that consolidated provisioning data across **AWS, Azure, and GCP** into a single governed access point, replacing fragmented manual lookups.
- **Improved data reliability across workflows** by writing **SQL** for data retrieval and validation and implementing regex-based checks that standardized incoming payloads and caught malformed records before they reached downstream processes.
- **Reduced unplanned downtime by 15%** by performing **root-cause analysis** on recurring application defects and resolving them during active development alongside senior engineers.
- **Managed development work in JIRA** by creating, triaging, and tracking **450+ story points across 5+ Agile sprints**, and documented workflows in Confluence to standardize processes and improve cross-team knowledge sharing.

DXC Technology

Associate Data Analyst

Bangalore, India

Aug 2021 – Apr 2022

- **Accelerated incident detection by 40% and recovered 20 hours per week** lost to manual triage by automating SQL-based analysis of server logs to detect recurring error patterns across 50+ servers, **with logs ingested from Azure Data Lake**.
- **Flagged release-level regression risks before deployment** by comparing each release's performance against **SQL baselines** and surfacing uptime trends through automated reporting dashboards, cutting unplanned operational downtime by 20%.
- **Cut query duplication by 20% and defect reopens by 30%** by building **reusable SQL data-access layers** adopted across 3 teams, standardizing how they queried 2,000+ QA records and isolated 8 recurring defect patterns.

PROJECTS

WorldCupIQ: FIFA 2026 Predictive Analytics & AI Platform

Python, dlt, DuckDB, MinIO, XGBoost, ChromaDB, Ollama, MCP, Streamlit

[Link](#)

Jun 2026

- **Architected a zero-cloud-cost medallion lakehouse** (MinIO + DuckDB) with **dlt**-powered API ingestion and web scrapers, transforming **49K+ international matches and 1,249 player records** into leakage-free ML feature tables.
- **Trained an XGBoost Poisson goal model** that beat an Elo baseline on 4,500+ held-out matches, powering a **vectorized Monte Carlo engine** simulating **10,000 full-tournament runs in seconds** for champion odds.

Sales & Profitability Dashboard

Tableau, Excel

[Link](#)

Mar 2025

- Analyzed **10,000+** sales records to surface regional revenue and profit trends through interactive **Tableau dashboards** used for executive business decision-making.
- Implemented drill-down analysis from region to product and customer segment using **interactive parameters and filters**.
